Who should attend?

This full day course is intended for General Sonographers who want to enhance their skills in the area of Breast Ultrasound.

Suggested Pre-course Activity

This course is aimed at those who are proficient General Sonographers, interested in exploring the specialty of Breast ultrasound. Material presented will be at an advanced level, and basic ultrasound concepts and techniques will be assumed.

Program SONO4

Saturday, 23rd February, 2019

Breast Ultrasound

- 08:30 Registration
- 09:00 The current environment - Breast screening standards in Australia's population
- 9:30 Recent developments in Breast Imaging - including complimentary imaging modalities, and other diagnostic investigations that may assist in the assessment of the breast
- 10:15 Morning tea
- 10:30 Cross modality correlation - Participants will have the opportunity to discuss with our experts the correlation between MRI, Mammography, Tomosynthesis and Breast Ultrasound
- 12:00 The role of breast ultrasound today
- 12:30 Lunch
- 13:00 Review of ultrasound imaging protocols - Participants will review standard imaging protocols, including real time assessment, as well as minimum recording requirements
- 13:45 Hands on practical session 1
- 14:30 Afternoon Tea
- 14:45 Hands on practical session 2
- 15:30 Treatment options and therapies (latest developments) and Case study and image review - During this session you will have the opportunity to interact with our clinical experts on a variety of case studies. This session will incorporate complementary imaging modalities and investigations, and discussion around how the ultrasound examination plays a role in the overall patient diagnosis and management
- 17:00 Close

If you do not have sufficient experience in general sonography, please consider enrolling in one of our introductory breast courses prior to attending SONO4.

Course Objectives

This course will build on the assumed basic ultrasound techniques, and enhance breast imaging skills. Discussion sessions will cover current expectations, detailed anatomy and physiology of breast tissue, and complimentary imaging modalities.

Teaching comprises lectures and hands on scanning of both simulation phantoms and real patients. Hands on scanning will be conducted in small groups.
